PTC Racing Division Announces Release of New Tire Durometer

>>PTC's Model 306RL provides, fast accurate, repeatable results.

Los Angeles, California, 02/13/2009 PTC Instruments Racing Division today announced release of its Model 306RL Racing Tire durometer. This high quality durometer provides ease of use to obtain accurate and repeatable tire hardness. Supplied to tech teams, race teams and tire manufacturers from karting to grand prix racing.

Currently being provided to Goodyear Racing, USAC and manufacturers and racing associations in order to establish a new level of hardness testing for race tires. PTC is working with tech teams and various tracks to provide a level playing field through uniform testing methods.

Model 306RL features a large rectangular base especially well suited for testing tires. It has a memory hand to simplify data taking and conforms to ASTM D2240 standard on durometers. Calibration is traceable to NIST and A2LA accredited calibrations are available. Following simple testing procedures the model 306RL provides reliable and repeatable readings. Whether it is used for

selecting the best tires, conforming to durometer rules or spotting doped tires it is the ideal durometer for racing tires.

“It is time to bring modern industrial test methods to the race track and in terms of tire hardness PTC’s Model 306RL is the right choice” said John Marcus PhD and CEO of PTC Instruments.

PTC’s new durometer entry in to the racing industry solves the old problems of lack of repeatability, low confidence and lack of accuracy. It maybe ordered online at www.ptc1.com .

For more information contact PTC Instruments, 2301 Federal Ave, Los Angeles California. 310.478-1134 or sales@ptc1.com .

PTC Instruments has been making quality instruments in the USA for over 60 years. PTC Metrology features a NIST traceable, fully accredited ISO 17025 calibration lab. Accreditation by A2LA. In addition to durometers PTC manufactures and calibrates thermometers and other industrial test instruments
